授業概要 <※掲載必須項目ですので必ずご記入ください。> Course Outline <※Necessary to write>
This class studies modern Korean economic development with fun!
授業の到達目標 <※掲載必須項目ですので必ずご記入ください。> Objectives <※Necessary to write>
We investigate various economic issues of South and North Korean economies. Examples of economic issues are economic development differences between North and South Korean economies, history of both economies after WWII, trade between North and South Korean economy, each country's export and import, each economy's labor market, and each economy's current situation. For better understanding of Korean economic issues, sometimes we need to employ economic concepts like GDP, inflation, unemployment, interest rate, and etc. When we meet new economic concepts like above, I will review back grounds of these concepts at introductory level. So you don't have to be scared of economics yet! Also during the semester, I hope you become more familiar with Korean economic issues along with global economic issues in various media sources, newspapers, news magazines, news programming, etc.

The course requirements will consist of midterm exam and final exam (detailed exam dates will be announced later).
